

X-RIDE

125 - 200

The X-Ride is not a trail bike, a trials bike or enduro motorcycle it is a different breed that provides its owner with a world of possibilities. It can be ridden on a variety of terrains including pavement. It has inherited the trials engine and has the agility to overcome nearly any obstacle. The chassis will allow you to traverse even the most extreme terrain without exception. The smooth, quiet, powerful engine along with the excellent chassis will allow you to ride in nearly any environment on a comfortable great handling motorcycle.

SHERCO X-RIDE, REALITY WITHOUT LIMITS

SHERCO
Motorcycles

125 - 200

The X-Ride is not a race bike, but it utilizes all of the experience that Sherco has gleaned from being involved in trial, enduro and supermotard racing. Aspects that have been taken from these exclusive racing bikes allow the X-Ride to help you fulfill your desires to escape and ride the narrow single track paths and ride trials type obstacles and also ride on fast tracks (*). But the X-Ride can be ridden on the road in an urban environment. With a 7 liter fuel tank and a very fuel efficient engine the X-Ride provides the rider with a high degree of autonomy. With a ground clearance of 325mm and a weight of only 87 kg the X-Ride opens the door to uncommon possibilities.

The production of the new bike is a reality, and the first units have already left the Sherco factory in Caldes de Montbui and are on their way to 5 different continents.
